

Language Translation Tool

A simple and user friendly AI based application developed using Python and Streamlit that translates text from one language to another instantly using Google Translator API.

Features

- Translate text into multiple languages
- Simple and clean user interface
- Fast and accurate translations
- Supports various international languages
- Copy translated text feature
- Easy to use for beginners

Technologies Used

- Python
- Streamlit
- Deep Translator
- HTML
- CSS

Project Structure

- app.py – Main application file
- requirements.txt – Required libraries
- README.md – Project documentation

How to Run the Project

Step 1 Install Python

Download and install Python from the official website.

Step 2 Install Required Libraries

Open terminal or command prompt and run:

```
pip install streamlit
```

```
pip install deep-translator
```

Step 3 Run the Application

streamlit run app.py

Step 4 Open in Browser

The application will automatically open in your browser.

How It Works

1. Enter the text you want to translate.
2. Select source language.
3. Select target language.
4. Click on the Translate button.
5. The translated text will appear instantly.

Output Screenshots

- Home Page
- English to Hindi Translation
- English to French Translation
- English to Spanish Translation

Advantages

- Saves time in translation
- Easy communication between languages
- Helpful for students and travelers
- User friendly interface

Future Enhancements

- Voice translation
- Text to speech feature
- Dark mode support
- Download translated text

Conclusion

The Language Translation Tool successfully translates text between different languages using Artificial Intelligence and translation APIs. This project helped in understanding API integration, Python development, and AI based applications.
